PROFESSIONAL SUMMARY

Full-stack software engineer with 4+ years of experience building software and delivering IT solutions for organisations of every size, across government, private and public sectors. I build enterprise platforms, health tech systems, inventory and point-of-sale software, custom business applications and AI/machine learning products, and I use prompt engineering and AI coding assistants daily to design LLM-powered features and ship faster. Senior Software Engineer at the Energy Commission of Nigeria (NYSC), Founder & Lead Engineer of Acies Africa Technologies, and Co-Founder & Senior Developer of GidaHaven.

CORE SKILLS

Frontend	React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Bootstrap, HTML5, CSS3, responsive UI
Backend	Node.js, Express, NestJS, PHP, Laravel, CodeIgniter, Python, Django, FastAPI, Flask, REST APIs, JWT/OAuth
AI & Prompt Eng.	Prompt engineering, LLM API integration, chatbots, AI agents & automation, TensorFlow, PyTorch, Scikit-learn, Hugging Face, OpenCV, CNNs, AI-assisted development
Data	MySQL, MongoDB, SQL, schema design, query optimisation
Design	UI/UX for web and mobile apps, landing pages, dashboards, wireframes, design-to-code
IT & Ops	Git/GitHub, agile delivery, QA testing, networking, CCTV & IP camera installation, IT consultation, technical support, virtual assistance

PROFESSIONAL EXPERIENCE

Senior Software Engineer, ICT Department (NYSC)
May 2026 – Present

Energy Commission of Nigeria

- Building ECN-SORMS (Smart Operations & Resource Management Software), one platform for HR, asset management, document management, attendance, clinic management and KPI tracking.
- Supporting system architecture, technical documentation and deployment for a national government agency.
- Replacing paper-based and disconnected processes with one shared, trackable system across departments.

Technologies: PHP, MySQL, enterprise architecture

Founder & Lead Engineer
2024 – Present

Acies Africa Technologies (CAC registered, 2026)

- Lead an IT solutions company serving government, healthcare, education, hospitality and SMEs: web solutions, custom software, health tech, AI solutions, IT consultation, and CCTV and camera installation.
- Designed and built Hospital, Hotel, Inventory & Pharmacy, HR, POS and School Management systems for paying clients.
- Lead development of an Events Ticketing & Management System with QR tickets, check-in and payments.
- Built AI customer support chatbots using prompt engineering and LLM APIs, with human handover when needed.
- Lead a team including a CTO and Chief Data Officer.

Technologies: React.js, Node.js, MongoDB, CodeIgniter, Laravel, Django, MySQL, LLM APIs, CCTV systems

Co-Founder & Senior Developer
Present

GidaHaven (gidahaven.com)

- Co-building a trusted property platform for Africa, launching in Abuja before expanding across Nigeria.
- Building map and area search, verified agent profiles, reviews, photo and video listings, and chat-based home matching.

Technologies: Web platform, maps, chat

Junior Software Engineer
Feb 2025 – Present

Swavy Global (Remote)

- Develop hotel management and reservation features with live availability and booking workflows.
- Built and tested FoodExpress.ng, keeping features stable and the UI consistent across releases.
- Work in a distributed team using Git, agile sprints and code reviews.

Technologies: PHP, CodeIgniter, JavaScript, Git

Software Engineering Intern
2024

Unitech Drilling Company

- Built and deployed a Mud Motor Tracking System to monitor drilling equipment performance.
- Automated weekly and monthly operational reports, replacing manual spreadsheet workflows.

Technologies: PHP, JavaScript, SQL

Technical Support & Virtual Assistant
2023 – Dec 2024

Swavy Global (Remote)

- Supported live web deployments and client systems including education portals; managed data entry, reporting dashboards, client communication, troubleshooting and live chat support.

Frontend Development Intern

2021 – 2023

Swavy Global

- Built a journal publishing website, improved the FoodExpress.ng frontend and built websites for brands and companies.

Technologies: HTML, CSS, Bootstrap, JavaScript

SELECTED PROJECTS

ECN-SORMS	All-in-one HR, asset, document, attendance, clinic and KPI platform for a federal agency
AI Customer Support Chatbot	LLM chatbot built with prompt engineering; answers from a business's own data
Face Recognition Attendance	CNN computer-vision system logging attendance in real time (Django, TensorFlow)
Hospital Management System	Patient records, appointments, pharmacy, lab results and billing (CodeIgniter)
HR, POS & School Management	Payroll and staff records; cloud sales and stock; enrolment and results
Events Ticketing Platform	QR tickets, dashboards, check-in and payments (React, Node.js, MongoDB)
Car Rental Management	Fleet and booking management (Node.js, TypeScript)
GidaHaven	Property platform for Africa with verified agents and map search

EDUCATION

B.Sc. Software Engineering

Nov 2021 – Oct 2025

Topfaith University

- Data structures, algorithms, machine learning, database systems and web development. Final-year project: CNN-based Face Recognition Attendance System.
